EXAMINER

NGUYEN, DILINH P

ART UNIT PAPER NUMBER

2814

DATE MAILED: 10/20/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.		Applicant(s)	
	10/723,474		BOON, SUAN JEUNG	
	Examiner		Art Unit	
	DiLinh Nguyen		2814	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 06 September 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 19-24 and 51-88 is/are pending in the application.
- 4a) Of the above claim(s) 62-88 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 19-24 and 51-61 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Remark

Newly submitted claims 62-88 are directed to an invention that is independent or distinct from the invention originally claimed (claims 19-24 and 51-61). Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claims 62-88 are withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 19 and 21-24, 51-54, 56-58 and 60-61 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gillespie (U.S. Pat. 5898858) in view of Capote et al. (U.S. Pat. 6121689) and Gilleo (U.S. Pat. 6265776).

Gillespie discloses an electronic system comprising:

a processor and a memory controller are integrated into a BGA chip package (fig. 3, abstract).

Gillespie does not explicitly disclose the chip package includes an adhesive layer covering the chip and having an array of column-shaped openings aligned with connection pads having a chamfer opposite the first surface of the adhesive layer at

each of the openings and a conductive a conductive material substantially filling the array of openings.

However, Capote et al. disclose a flip chip includes:

a first semiconductor device 10 having a first side and a second side, the first side comprising a first array of connection pads 24, the connection pads electrically coupled to circuits on the first semiconductor device;

an adhesive layer 22 covering the first side of the first semiconductor device with a first surface of the adhesive layer contacting the first side, the adhesive layer having an array of column-shaped openings 28 (figs. 6 and 7) substantially aligned with one or more connection pads of the first array of connection pads; and

a conductive material 30 substantially filling the array of openings (figs. 3, 6-7, column 7, lines 60 et seq.) in order to provide a flip chip configuration.

Gilleo discloses a semiconductor device comprising a wafer 12; an underfill layer 18 covering the first side of the wafer 12 with a first surface of the underfill layer contacting the first side and having a chamfer, opposite the first surface of the underfill layer 18 (cover fig.) in order to form the contact angles at the interface between the flux coating and the underfill layer (column 8, lines 2-3).

Therefore, it would have been obvious to one having ordinary in the art at the time the invention was made to have an adhesive layer covering the chip and having an array of openings aligned with connection pads having a chamfer and a conductive material substantially filling the array of openings as taught by Capote et al. and Gilleo into the device of Gillespie in order to provide a flip chip configuration without bending

the chip and substrate and form the contact angles at the interface between the flux coating and the underfill layer.

- Regarding claim 21, Capote et al. disclose that the adhesive layer 22 is comprised of film layer (fig. 3, column 8, lines 12-18).
- Regarding claim 22, Capote et al. disclose that the adhesive layer includes a curable, fluid material (fig. 3, column 8, lines 17-18).
- Regarding claim 23, Capote et al. disclose that the conductive material is solder 30 (fig. 7, column 9, lines 3).
- Regarding claim 24, Capote et al. disclose that the conductive material is cylindrical in shape (fig. 7).
- Regarding claim 52, Capote et al. disclose that the adhesive layer includes a thermoplastic material (column 22, lines 16-17).
- Regarding claims 51-53, Gilleo discloses that the underfill layer 18 includes a thermoplastic material or thermoset material (column 4, lines 30-32) and the underfill layer 18 would includes an elastomer.
- Regarding claim 54, Capote et al. discloses that the adhesive layer 22 is applied to the chip in either liquid or adhesive tape form; therefore, the adhesive layer includes a pressure-sensitive material (column 8, lines 17-18).
- Regarding claim 56, Capote et al. disclose that the conductive material includes a conductive paste (column 3, lines 54-55) that hardens upon curing.
- Regarding claim 57, Capote et al. disclose that the conductive material includes a conductive that hardens upon curing and it would have been obvious to one

having ordinary skill in the art to have the conductive material includes a conductive gel.

- Regarding claim 58, Capote et al. discloses that the conductive material 30 is column-shaped (fig. 7).
- Regarding claim 60, Capote et al. disclose that the conductive material 30 is flush with a surface of the adhesive layer 22 opposite the first surface of the adhesive layer (fig. 8).
- Regarding claim 61, Capote et al. disclose that the conductive material 30 protrudes beyond a surface of the adhesive layer 22 (fig. 7).

3. Claims 20, 55 and 59 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gillespie (U.S. Pat. 5898858) in view of Capote et al. (U.S. Pat. 6121689) and Gilleo (U.S. Pat. 6265776) as applied to claim 19 above, and further in view of Toyosawa et al. (U.S. Pat. 6337257).

Gillespie, Capote et al. and Gilleo substantially disclose all the limitations as claimed above except for a protective material substantially covering the second side of the semiconductor device.

However, Toyosawa et al. disclose a semiconductor package comprising a second surface 36 of a semiconductor chip 32 are in contact with a protective tape (cover fig., column 12, lines 28-30). Therefore, it would have been obvious to one having ordinary in the art at the time the invention was made to modify the device structure of the above combination by having a protective material covering the second side of the semiconductor device because as taught by Toyosawa et al., such protective

material would protect and reinforce the back surface of the semiconductor chip for use in a semiconductor package (column 12, lines 28-30).

- Regarding claim 55, it would have been obvious to form the protective coating or the protective tape includes an epoxy.
- Regarding claim 59, Toyosawa et al. disclose the second side of the first semiconductor device includes a bonding layer (column 12, lines 28-30).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to DiLinh Nguyen whose telephone number is (571) 272-1712. The examiner can normally be reached on 8:00AM - 6:00PM (M-F).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wael Fahmy can be reached on (571) 272-1705. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
